Trans. of Makromolekulare Chemie (Switzerland)
1959, v. 32, no. 2/3, p. 170-183.

Grignard compounds have been used for anionic caprolactam polymerization, in order to obtain a more uniform course. It was possible to initiate polymerization processes therewith, but they followed the same rules observed when using sodium caprolactam. The addition of acetic acid esters of long-chain alcohols, however, resulted in a distinct stabilizing effect. Acetyl caprolactam, which was used in different concentration ratios, had a still better effect. The resulting rules regarding the dependence of the number average degree of polymerization in equilibrium upon
